

Installing CAMEO

In this chapter, you'll find the system requirements and installation instructions for both the Microsoft Windows and Apple Macintosh versions of the CAMEO modules, as well as explanations of how to install CAMEO on a network and where to get the resources you need to install ALOHA and MARPLOT.

To install all three CAMEO components—the CAMEO modules, ALOHA, and MARPLOT—you need to

- Follow the instructions in this chapter to install the CAMEO modules.
- Follow the instructions in the ALOHA and MARPLOT manuals to install those programs (see “Getting and installing MARPLOT and ALOHA” on page 17).

System requirements

Below are the minimum system requirements for running CAMEO on Microsoft Windows and Apple Macintosh computers. (These are the requirements for installing and running all three CAMEO components: CAMEO's modules, ALOHA, and MARPLOT.)

Windows

Minimum hardware requirements. Intel-compatible 486/33 or later; hard disk drive with 100 MB of free hard drive space, VGA color display; sufficient RAM (depends on the version of Windows you're using).

Software requirements. Any of the following versions of Windows:

- Windows 95 (requires Internet Explorer 5.01 Service Pack 2 or later)
- Windows 98
- Windows Me
- Windows NT 4.0 (requires Internet Explorer 5.01 Service Pack 2 or later)
- Windows 2000
- Windows XP

Macintosh

Hardware requirements. Power Macintosh or Macintosh OS computer with a PPC 601 or higher processor; hard disk drive with 100 MB of free hard drive space; sufficient RAM (depends on the version of the Macintosh operating system you're using).

Software requirements. System 8.6 or later for the Macintosh OS.

Note: If you're using OS X, you will need to run all three CAMEO components—the CAMEO modules, ALOHA, and MARPLOT—in Classic mode (you can set Classic mode under System Preferences). You'll also need to run your web browser in Classic mode in order to use the CAMEO online help system.

To install the CAMEO components on a Macintosh running OSX, you install MARPLOT and ALOHA, then move the MARPLOT and ALOHA folders into the "Applications (OS9)" folder. You either install CAMEO into that folder or move it into that folder after installation.

Installing the CAMEO modules

Before you install

If you haven't already obtained the CAMEO installer for your operating system, download it from www.epa.gov/ceppo/cameo/request.htm.

- The installer for the Windows version of CAMEO is CAMEOfmInstaller.exe.
- The installer for the Macintosh version of CAMEO is CAMEOfm Installer.

Before installing CAMEO on either a Macintosh or Windows computer, disable your virus protection software and check that no other applications are running.

Installation procedure

Follow the steps below to run the installer:

1. Download the installer to your hard drive, if you haven't already.
2. Double-click the installer file to begin the installation process.
3. Follow the instructions in the installer window to complete the installation.

We recommend that you install CAMEO at the default location:

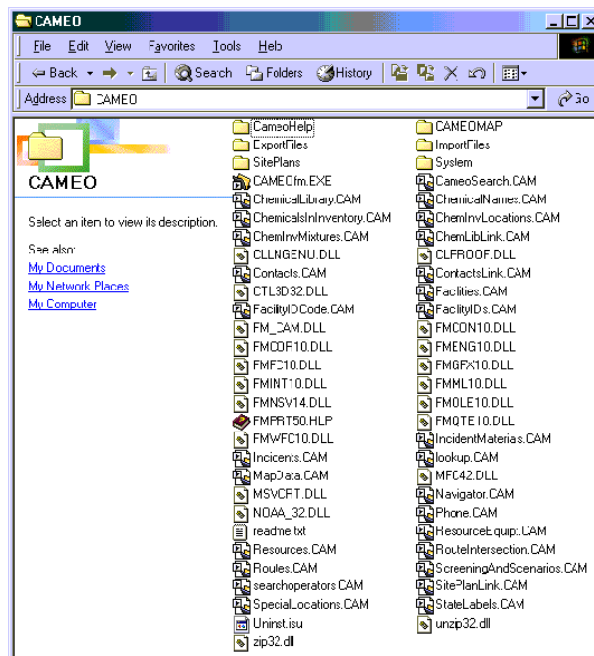

- C:\CAMEO, if you're installing onto a Windows computer.
- at the top level of the hard drive on your Macintosh.

The installer automatically installs CAMEO at the default location unless you choose a different place to put it. Installing CAMEO at the default location makes it easier for the three CAMEO components to initially find each other in order to share information.

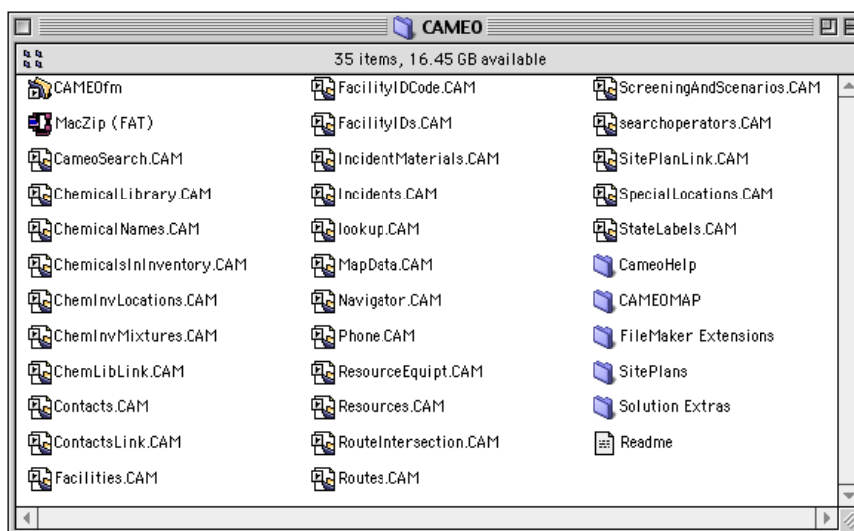

Finishing up

Important: Once you've installed the CAMEO modules, don't delete any of the files or folders in your CAMEO folder, or move them out of the CAMEO folder.

Here's how your new CAMEO folder will look in Windows:

Here's what your new CAMEO folder will contain on your Macintosh computer:

Getting and installing MARPLOT and ALOHA

To install MARPLOT and ALOHA, you'll need to obtain the installer for each of these programs, along with the user's manual:

- Download the MARPLOT installer and manual from www.epa.gov/ceppo/cameo/marplot.htm.
- Download the ALOHA installer and manual from www.epa.gov/ceppo/cameo/aloha.htm.

Follow the installation instructions in the ALOHA and MARPLOT manuals to install these programs.

By default, the MARPLOT and ALOHA installers install those programs in folders at either the top (root) level of the C: drive in Windows (i.e., at C:\ALPHA and C:\MARPLOT) or the top level of the hard drive on a

Macintosh. We recommend that you install both programs at their default locations (doing so makes it easier for the three CAMEO components to initially find each other in order to share information).

Important: Don't install MARPLOT if you intend to install LandView, which includes MARPLOT. If you already have installed MARPLOT, and decide to install LandView, first remove MARPLOT from your hard drive by moving the MARPLOT folder into the recycle bin or trash and, in Windows, removing MARPLOT from the Start menu (from the Start menu, select Settings, then select Taskbar and Start Menu; click the Advanced tab, click Remove, then select and remove the MARPLOT folder).

However, before you uninstall MARPLOT, be sure to first save all the maps you'd like to keep—they'll work in LandView as well as MARPLOT.

Updating from an older version

To import your data from the previous FoxPro version of CAMEO for Windows to your new copy of CAMEO, follow the steps in "Importing data from a previous version of CAMEO" on page 201.

In the current version of CAMEO, there is no built-in procedure for importing data from the previous version of CAMEO for Macintosh. If you are a Macintosh user and would like to import data from a previous version of CAMEO into the new version, please contact ORR.CAMEO@noaa.gov to arrange for assistance with your data transfer.

Check to be sure that you have downloaded and installed the latest versions of MARPLOT and ALOHA. At the time this manual was written, the latest version of MARPLOT was 3.3 (released in spring 2002), and the latest version of ALOHA was 5.2.3 (released summer 1999).

Installing CAMEO on a network

You can install and run CAMEO on a network. See “Installing and running CAMEO on a network” on page 232.
